

AELP 101

Introduction to Electrical Engineering Laboratory

General Instructions

1. You are required to know the locations of the emergency trip switch in the laboratory.
2. You are required to be familiar with basic safety procedures for electrical shock.
3. You are required to dress safely, no garments likely to pick-up static, shoes such that you are not inadvertently subject to shock, nothing that impedes your ability to work.
4. You should be in the lab within 5 minutes of the start hour. Otherwise, you may miss important instructions, and lab access for that session may also be refused.
5. During the lab class, it is required that one student of the group is always at the worktable once the experiment has started.
6. It is required that you take explicit permission if you have to leave the lab.
7. It is not permissible to be alone in the laboratory at any time.
8. Reports are due every week at the beginning of the lab class hour.
9. See to it that your laboratory partner knows your whereabouts. If you are unable to come to lab for any reason, inform him/her.
10. Coordinate for the make-up times with the instructor/TA.
11. Do not switch on the circuit/experiment until you get it checked.
